Fig. 7

A schematic diagram of a closed-loop optical resonator. The resonator is formed by four mirrors arranged in a square configuration. A double-slit grating is positioned in the center of the resonator. The grating consists of two parallel gratings, each with four slits. The slits are labeled with wavelengths:  $\lambda_1, \lambda_2, \lambda_3, \lambda_4$  and  $\lambda_1 - \lambda_n$ . The light paths are indicated by arrows, showing the circulation of light within the resonator. The number 1300 is also present in the diagram.
